DAIKIN MULTI-SPLIT R-32 AND R-410A AIR CONDITIONERS

The Super Multi NX outdoor units are capable of efficiently sharing capacity between several indoor units. Each indoor unit can be individually controlled to suit your specific requirements. This means airflow, temperature settings and scheduling can all be adjusted to meet personal preferences, delivering whole house comfort for everyone.

R-32

NEXT-GENERATION **R-32 REFRIGERANT**

As the sole worldwide manufacturer of both air conditioning equipment and refrigerants, Daikin is continuously researching refrigerants as well as new technologies that can reduce energy consumption. Use of refrigerants with a lower impact on global warming is urgently required as climate change has become one of the most critical global issues. Daikin has now adopted R-32. This next-generation refrigerant does not deplete the ozone layer and has a lower impact on global warming.

DAIKIN PROMOTES **R-32 WORLDWIDE**

To encourage use of R-32 refrigerant, we have released basic patents on air conditioner production and sales free of charge. This is intended to help manufacturers in each country produce new systems. We also provide technical and background seminars and other programs designed to support R-32 adoption.

ZERO OZONE LAYER DEPLETION

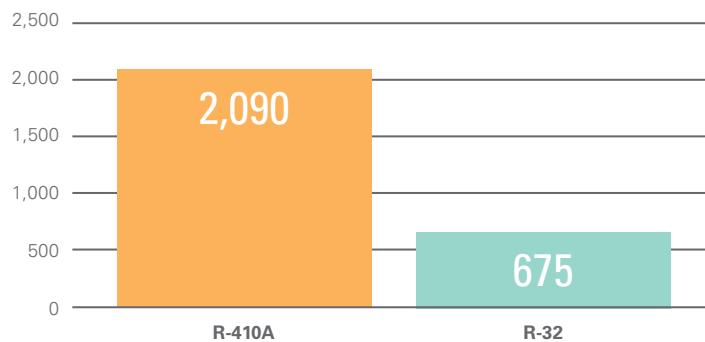

The ozone layer surrounds the Earth and helps to absorb the harmful ultraviolet rays in sunlight. Although R-22 (HCFC) refrigerant had been used in air conditioners and refrigerators, it damages the ozone layer and its use is to be mostly eliminated by 2020. To replace R-22, Australia, Taiwan, Japan and European countries with more progressive regulations selected R-410A (HFC). However, R-410A also has issues related to its high global warming potential.

LESS IMPACT ON GLOBAL WARMING

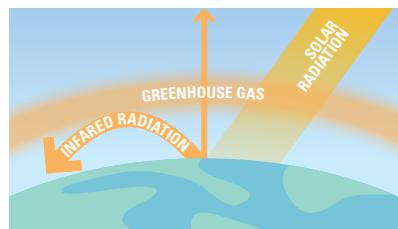

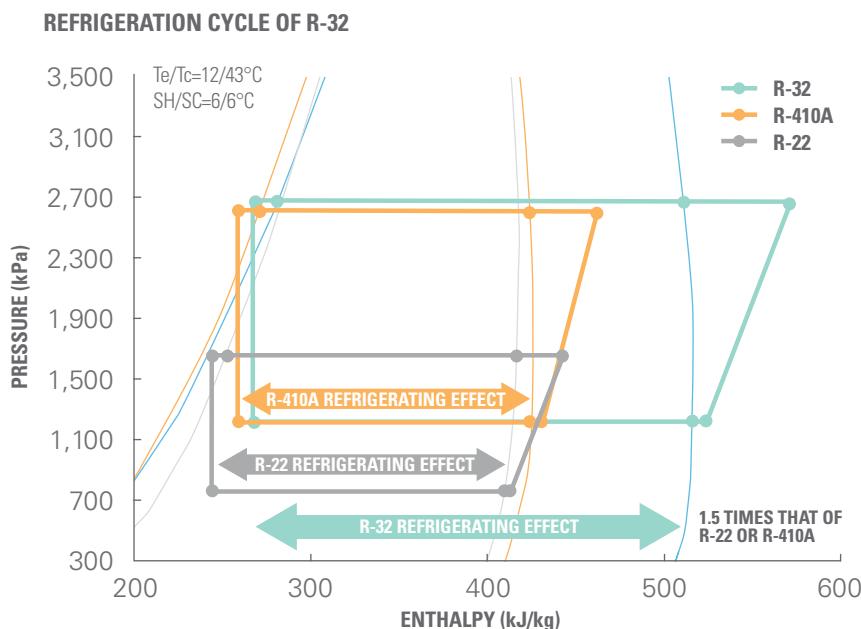

The Earth retains solar heat in the daytime for warming and then releases this heat at night, allowing it to maintain an optimal temperature range. However, with greenhouse gases increasing, it is more difficult to discharge heat and the planet is gradually becoming warmer. This is called global warming. R-32 has only around 30% of the global warming potential of R-410A and R-22.

GLOBAL WARMING POTENTIAL¹

INCREASED ENERGY EFFICIENCY

The potential refrigerating effect of R-32 is 1.5 times that of R-22 or R-410A. Thus the piping diameter can be smaller.

Greenhouse gases cause damage which allows solar radiation to pass through the Earth's outer atmosphere while also trapping infrared radiation. These gases rapidly increase and interfere with the Earth's ability to release heat into space, causing the ambient temperature to rise.

Note: 1. Global warming potential values are based on the Fourth Assessment Report from the Intergovernmental Panel on Climate Change (IPCC).

SMALL YET POWERFUL MULTI SYSTEM CONNECTABLE AT UP TO 181%

In most homes, people shift between large living areas during the day and the bedrooms at night. As this happens, Super Multi NX seamlessly redistributes capacity. This allows one powerful outdoor unit to support indoor units up to 181% of its rated capacity, economically air conditioning your entire home.

THE OUTDOOR UNIT DIVIDES CAPACITY BETWEEN THE INDOOR UNITS AS NEEDED

FIVE UNITS OPERATING

TWO UNITS OPERATING

	3MXM52RVMA	4MXM68RVMA	4MXM80RVMA	5MXM100RVMA
Max. connected indoor unit capacity	9.0 kW	11.0 kW	14.5 kW	15.6 kW
Ratio	173%	162%	181%	156%

SUPER POWERFUL

Super Powerful mode boosts airflow to high volume for 20 minutes or until the set temperature is reached, enabling rapid cooling or heating of any room. This function is extremely convenient when guests visit unexpectedly or you are just about to go to bed. Even if all indoor units are operating, capacity is immediately diverted to the unit for which you press the Powerful button. Only multi-split systems can adjust capacity between units in this way.

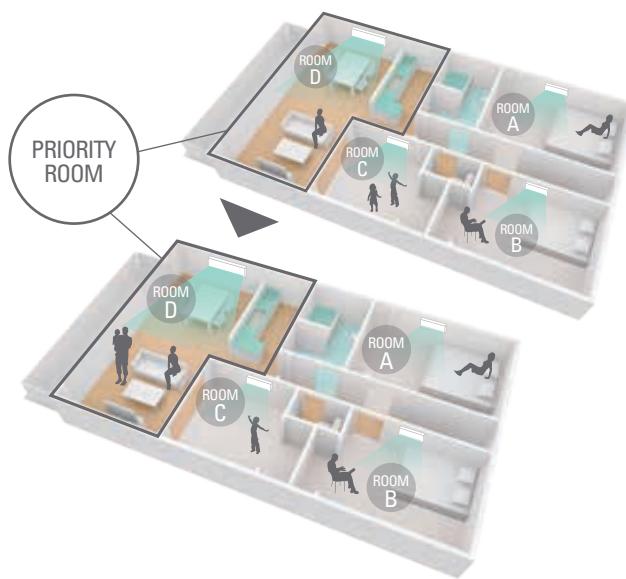

This function is available with wall-mounted models and duct-connected, low external static pressure models when using wireless remote controllers.

PRIORITY ROOM SETTING

Priority Room Setting assigns priority control over Super Powerful and operation mode to a selected room. This enables a combination of individual and centralised control. Initial setting is required during installation to activate this function.

Super Powerful: When you select Super Powerful in a priority room, the indoor unit boosts airflow to high volume until the set temperature is reached. Even if all indoor units are operating, capacity is immediately diverted to the unit for which you press the Powerful button. The capacities of units in other rooms are automatically adjusted.

Operation Mode: The operation mode (cooling or heating) of the indoor unit in the priority room is given preference. If the modes of units in other rooms differ from the unit in the priority room, they wait on standby to begin operation. The operation mode cannot be changed from other rooms.

OUTDOOR UNIT QUIET OPERATION

Outdoor unit operating sound pressure levels can be decreased from the rated operation sound using the wireless remote controller. If Priority Room Setting is activated during installation, this function can easily be set from the remote controller in the priority room.

This function is available with wall-mounted models and duct-connected, low external static pressure models when using wireless remote controllers.

Unless a priority room is registered, Outdoor Unit Quiet Operation must be set from the remote controller for each indoor unit.

LOWER POWER CONSUMPTION

Super Multi NX achieves EERs of 3.91 to 4.95 for cooling operation and COPs of 4.38 to 5.15 for heating operation thanks to Daikin's DC Inverter control and next-generation R-32 refrigerant.

EERs AND COPs

CAPACITY CLASS (kW)	MODEL NAME	INDOOR UNIT COMBINATIONS	COOLING OPERATION					HEATING OPERATION					
			1	2	3	4	5	[w/w]	1	2	3	4	5
5.2	3MXM52RVMA	2.0+2.0+5.0					4.95					5.15	
6.8	4MXM68RVMA	2.0+2.0+2.0+5.0					4.39					4.94	
8.0	4MXM80RVMA	2.5+3.5+3.5+5.0					4.02					4.38	
10.0	5MXM100RVMA	2.0+2.5+2.5+2.5+6.0					3.91					4.72	

WHAT ARE EER AND COP?

An air conditioner's EER (energy efficiency ratio) for cooling operation and COP (coefficient of performance) for heating operation indicate how efficiently the unit uses energy. A higher EER and COP mean greater energy efficiency. They also mean lower electricity consumption, and of course lower power bills. AEER and ACOP are annualised versions of EER and COP. They are virtually the same thing but exclude standby power.

$$\text{EER AND COP} = \frac{\text{CAPACITY (W)}}{\text{POWER CONSUMPTION (W)}}$$

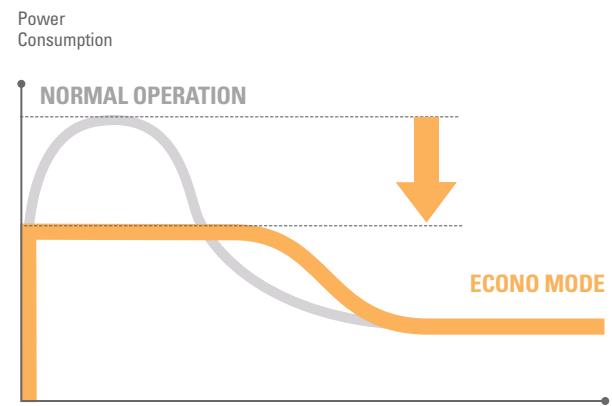

ECONO MODE

Most people use their home air conditioner during peak demand periods. Econo Mode prevents your inverter air conditioner operating at full capacity, helping to limit maximum power consumption.

This is particularly useful if the operating load is high, for example, at startup or during large gatherings and periods of direct sunshine. Activating Econo Mode helps to cut peak demand in your region.

This function is available with wall-mounted models and duct-connected, low external static pressure models when using wireless remote controllers.

Maximum capacity decreases during Econo Mode, requiring more time to reach the set temperature.

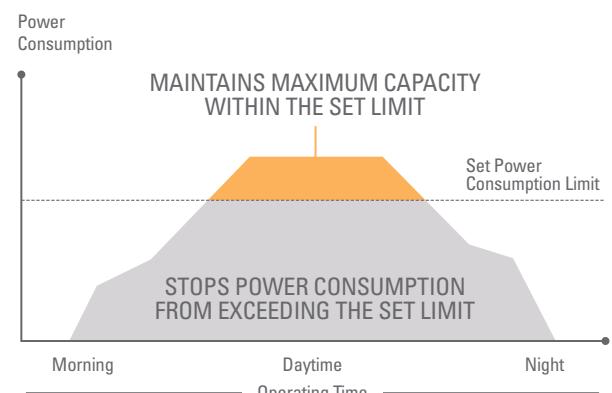

DEMAND RESPONSE ENABLING DEVICE (optional adaptor)

The inclusion of a demand response enabling device allows the electricity provider to independently control the capacity of an air conditioning system at various programmed levels. This helps the provider to manage peak power demand and reduce load on the electricity grid when necessary.

The air conditioner receives signals sent by the provider to reduce electricity consumption using a wattmeter (Smart Meter) installed in each household, and controls its power accordingly. Such control complies with demand response mode (DRM) 1, 2 and 3 of Australian Standard AS/NZS 4755.

This system leads to reductions in household electricity bills. In addition, consumers in some states may be eligible for Energy Saving Incentives when they purchase new energy efficient air conditioners equipped with demand response enabling devices.

POWER CONSUMPTION UPPER LIMIT

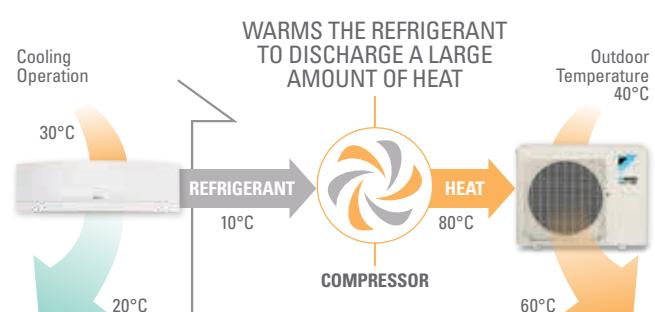

DRM1	0% <i>forcibly stops the compressor</i>
DRM2	40%
DRM3	60% to 90%

Demand response enabling device BRP070A42 or BRP070A46 is required. The device must be connected to the printed circuit board in the outdoor unit.

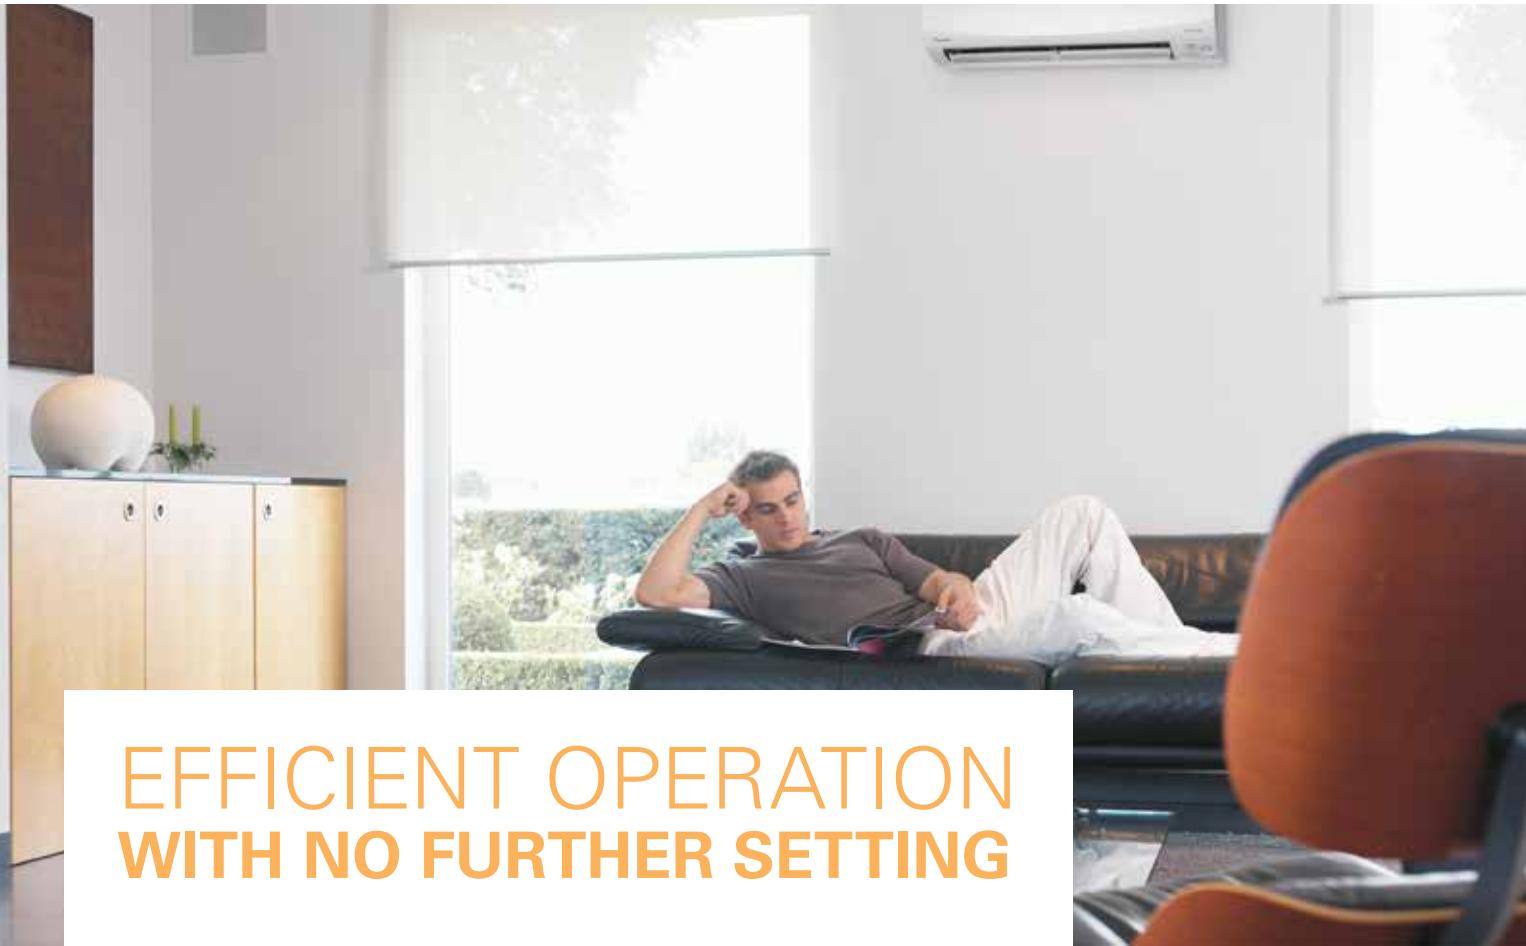

HIGH-EFFICIENCY MOTORS CREATE ENERGY SAVINGS

During rapid cooling, the motor for the compressor increases the rotation speed to rapidly warm the refrigerant by condensing it and allow heat to be discharged outdoors. The motor accounts for 90% of the power consumption of an air conditioner. This makes high-efficiency motors a critical point for energy savings.

To discharge a large amount of heat outdoors, the refrigerant temperature must be higher than the outdoor temperature of 40°C. In this case, the temperature of the refrigerant returned from the indoor unit is 10°C. The refrigerant is heated to 80°C so the heat can be discharged easily.

Note: 1. Indoor unit combinations show the configurations when each outdoor unit is operating at maximum capacity

EFFICIENT OPERATION WITH NO FURTHER SETTING

Daikin inverter air conditioners automatically operate at low capacity most of the time. Turning your system on and off means it has to operate at higher capacity to heat or cool a room. To save electricity, it is more efficient to continue operation at low capacity. Super Multi NX can automatically adjust the temperature and air volume while suppressing humidity to boost efficiency.

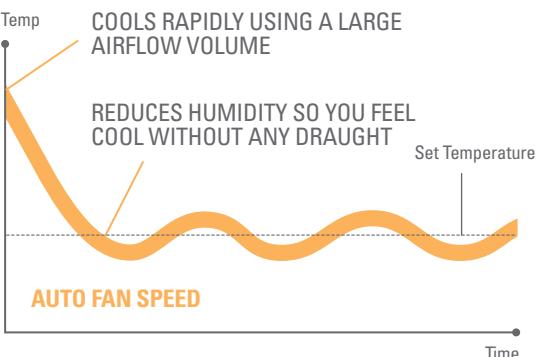

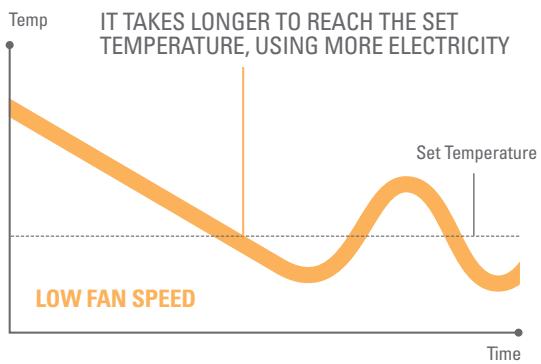

COMFORTABLE AUTO FAN SPEED

If you select Comfortable Auto Fan Speed, Super Multi NX operates at maximum efficiency and comfort without any further setting. This function precisely maintains the room temperature using automatic control. After adjusting the fan speed to high to rapidly reach the set temperature, it switches to low. When the room and set temperatures are close, it slightly increases speed to reduce humidity and ensure a comfortable balance between temperature and humidity so you feel cool without any draught.¹

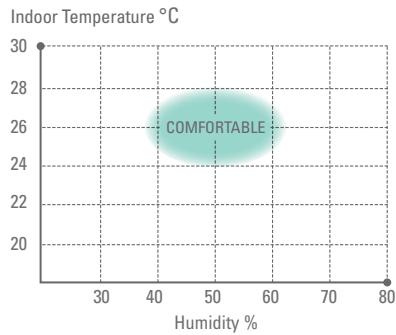

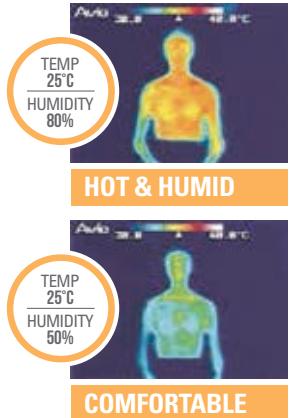

DURING COOLING OPERATION

FEEL COOLER WITH LOWER HUMIDITY

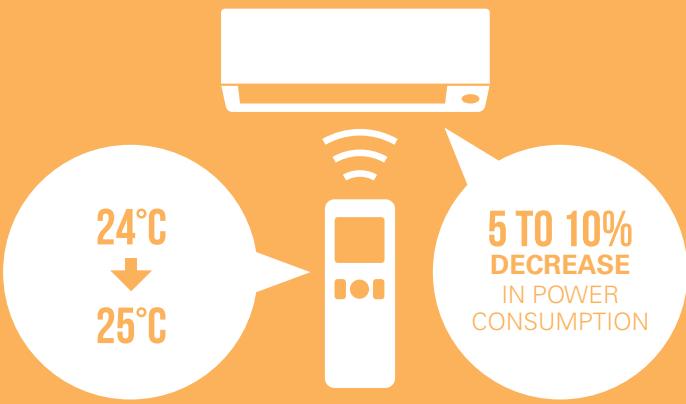

Humans release body heat by evaporating moisture on our skin, meaning we feel cooler with lower humidity. Daikin has used this knowledge to create a more comfortable balance between temperature and humidity.

People can experience the same comfort with an indoor humidity of 40 to 60% even at 2°C above the set temperature.

SAVE 10% WITH A 1°C INCREASE²

The temperature setting of an air conditioner is closely related to its power consumption. Raising the set temperature by just 1°C will produce a power saving of about 5 to 10% for cooling operation. When you are feeling hot, try increasing the air volume instead of lowering the set temperature. You will feel cooler and the increase in power use is slight compared to decreasing the set temperature.

Notes: 1. Suppression of humidity may not be possible depending on the heat load in a room.

2. Based on information provided by the Department of the Environment and Energy, Commonwealth of Australia, September 2017 (<http://yourenergysavings.gov.au/guides/energy-saving-guide-northern-australia?page=2>).

INDIVIDUAL CONTROL WITH LESS ENERGY WASTAGE

Super Multi NX provides both individual and centralised control. Selecting individual control allows you to operate each unit from its remote controller for more precise setting of air volume and temperature. The ability to maintain comfort without changing the set temperature or turning the unit on/off is highly effective for cutting energy wastage

 Count Up-Down On Timer

14 Sets clock

15 Selects timer, mode, setting significant number, day, time and temperature

TEMPERATURE ADJUSTMENTS OF 0.5°C

Temperatures can be set in precise steps of 0.5°C, allowing you to make fine adjustments for optimum comfort. These subtle changes are useful when you need to make temperatures "slightly higher" or "slightly lower". They also mean you do not have to constantly readjust the set temperature, helping to lower power consumption.

SELECTABLE AIRFLOW PATTERNS

Power use can be reduced by changing the airflow volume and direction as desired, without altering the set temperature or turning the power on/off. With the Super Multi NX, you can easily adjust these settings from the remote controller.

FUNCTIONS FOR ADJUSTING AIRFLOW

DIRECTING AIRFLOW

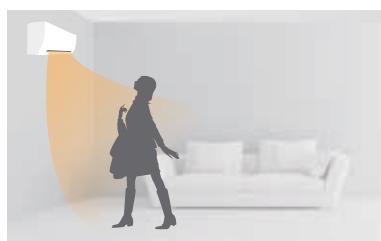

SUPER POWERFUL

This advanced function boosts airflow until the set temperature is reached. It is available for heating and cooling operation.

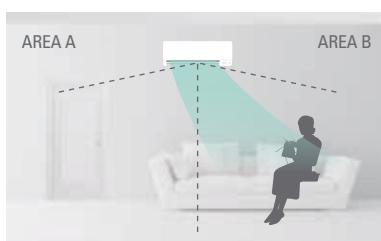

HEAT PLUS

Heat Plus provides quick, direct spot heating. It is available for heating operation on reverse cycle models.

NEW TWO-AREA INTELLIGENT EYE

This function conveniently directs airflow towards people to increase cooling.

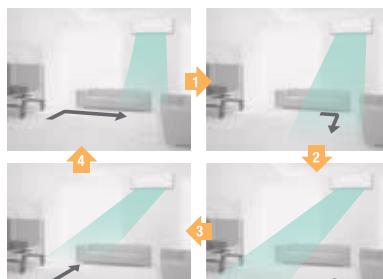

MAINTAINING COMFORT

VERTICAL AUTO-SWING (up and down)

HORIZONTAL AUTO-SWING (left and right)

3D AIRFLOW

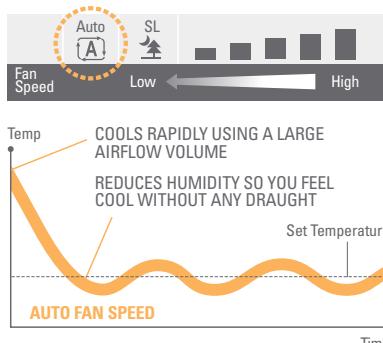

This advanced function boosts airflow until the set temperature is reached. It is available for heating and cooling operation.

THE FLAPS AND LOUVERS SWING IN TURN, EXPANDING THE COMFORT ZONE

COMFORTABLE AUTO FAN SPEED

This function automatically controls fan speed for maximum efficiency and comfort. After rapidly cooling a room, it switches to low and then precisely adjusts speed to balance temperature and humidity.

PREVENTING DRAUGHTS

COMFORT AIRFLOW MODE

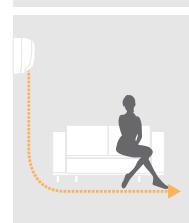

Comfort Airflow Mode prevents uncomfortable draughts from blowing directly on to a person's body. This setting redirects air by moving the flap upward during cooling operation and downward during heating operation.

COOLING

HEATING

NEW TWO-AREA INTELLIGENT EYE

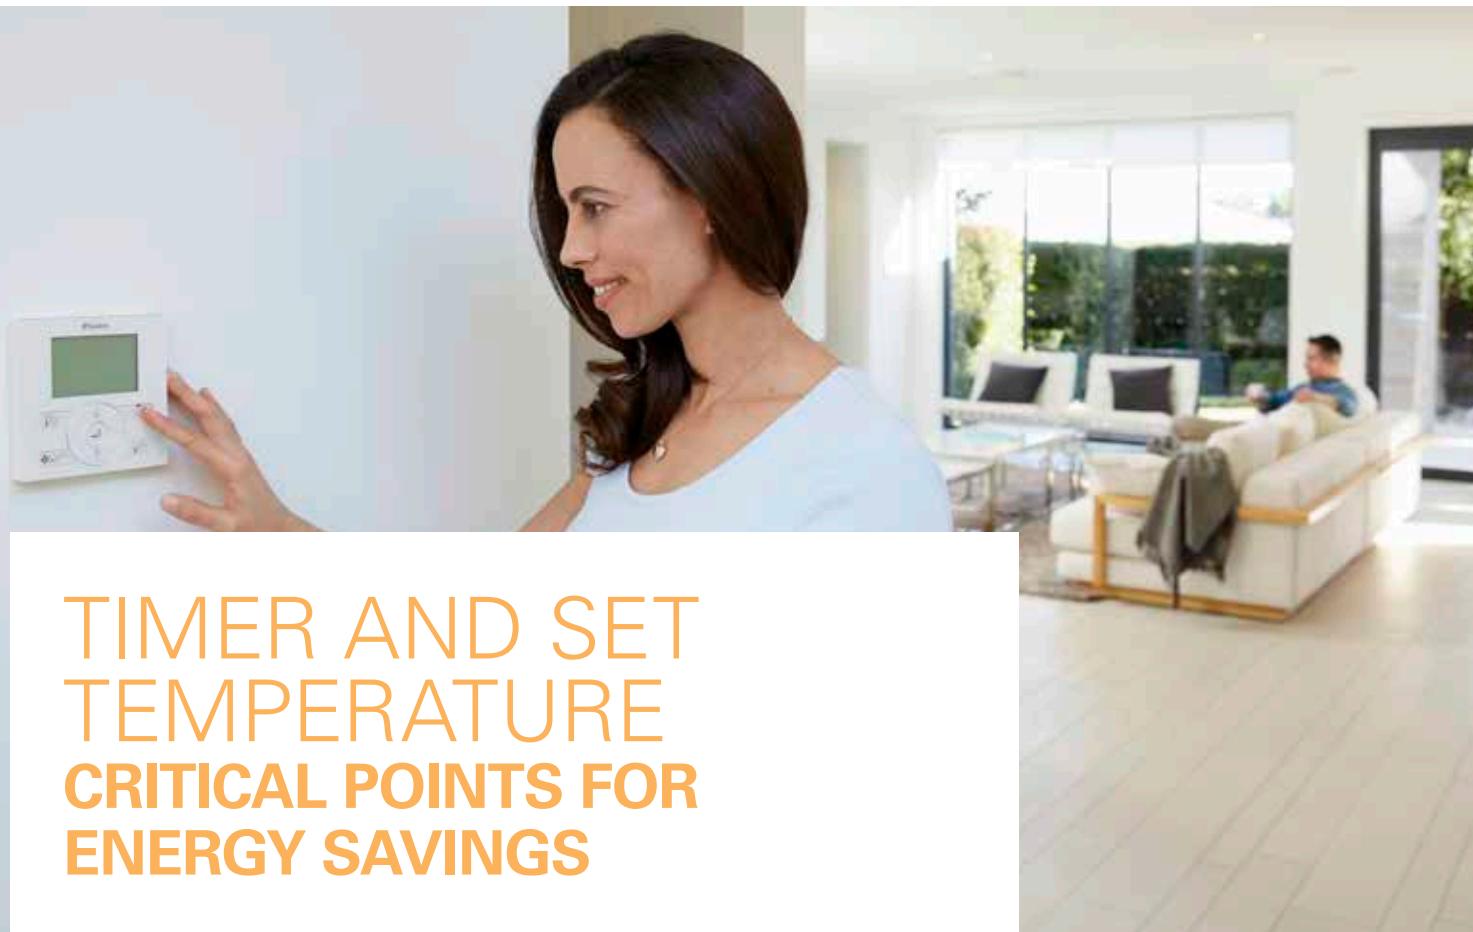

This function conveniently directs airflow away from people to prevent draughts.

DAIKIN MOBILE CONTROLLER (optional adaptor)

The Daikin Mobile Controller application ensures a comfortable air conditioned environment is waiting whenever you return home. The application lets you manage your Super Multi NX from anywhere. Its optional adaptor is available for the wall-mounted type.

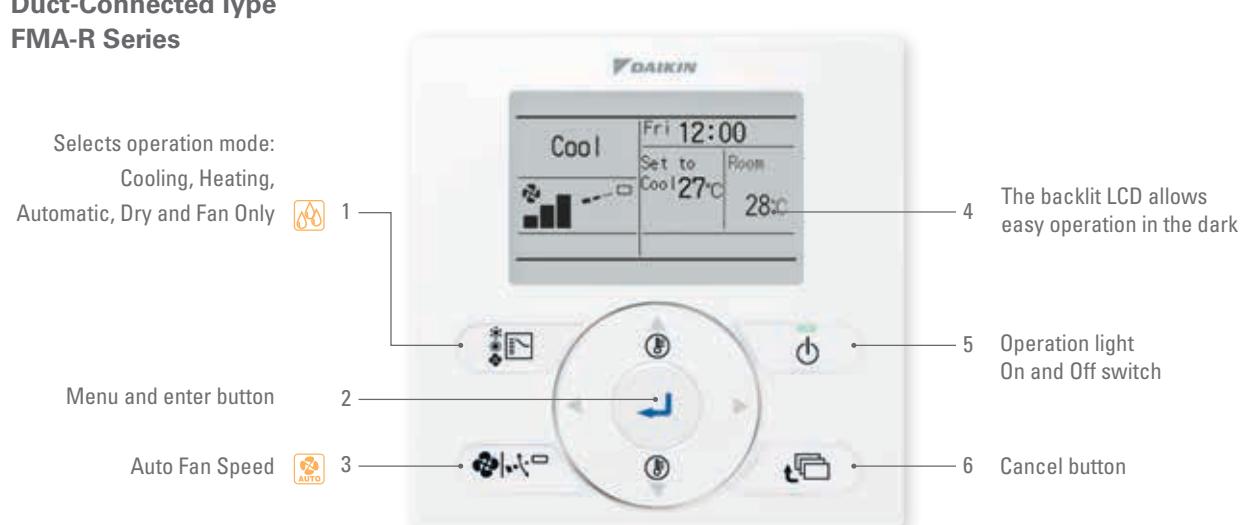

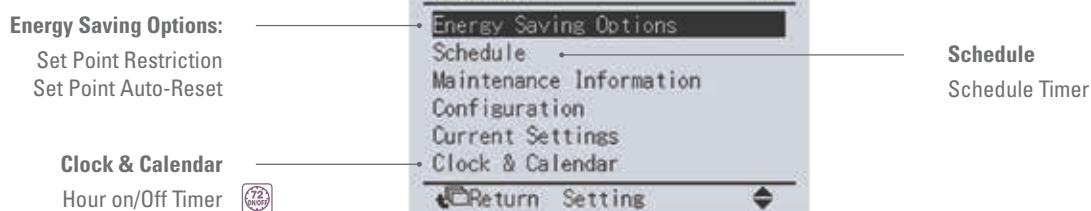

TIMER AND SET TEMPERATURE CRITICAL POINTS FOR ENERGY SAVINGS

WIRED REMOTE CONTROLLER

Duct-Connected Type
FMA-R Series

MAIN MENU

SCHEDULE TIMER

The Schedule Timer allows up to five actions to be programmed for each day of the week. You can easily schedule on/off times and also set temperatures in advance for each of these periods. Once the weekly timer is set, the air conditioner operates each day without controller input. This means your system will constantly maintain a comfortable temperature and automatically turn itself off when you go out.

Control (example) Details

Schedule Timer	Weekdays 25°C, 5:00 pm and 0:00 am Holidays 25°C, 9:30 am and 11:00 pm
----------------	---

Weekday On 5.00pm 25°C

Weekday Off 0.00am

Holiday On 9.00am 25°C

Weekday Off 11.00pm

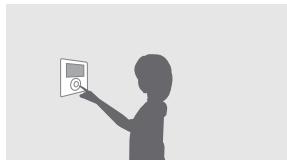

SET POINT RESTRICTION

This function saves energy by limiting the minimum and maximum set temperatures to avoid excessive heating or cooling. For example, if your children try to reduce the temperature to 20°C on a wired remote controller, the system will restrict the set point range to 23 to 28°C.

During Cooling Operation

25°C CAN BE SET

20°C CANNOT BE SET

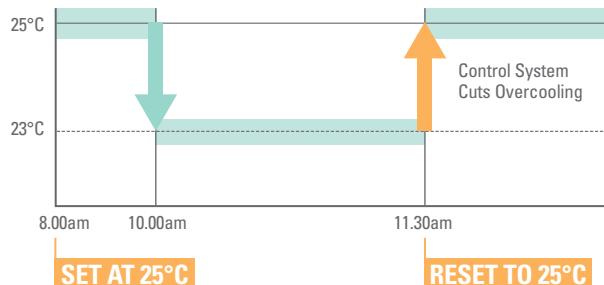

Control (example) Details

Set Point Restriction	23 to 28°C during cooling operation
-----------------------	-------------------------------------

SET POINT AUTO-RESET

If the set temperature is changed, this function will automatically return it to the preset level after a fixed period of time. This period can be selected from 30, 60, 90 and 120 minutes.

During Cooling Operation

Control (example) Details

Set Point Auto-Reset	25°C, 90 minutes
----------------------	------------------

CLEAR DISPLAY AND SIMPLE OPERATION

Wired remote controllers feature a dot matrix display, which means the icons are always sharp and clear. They also have a convenient backlight for easy viewing in the dark. Large buttons and arrow keys make it simple to select functions.

LARGE BUTTONS AND ARROW KEYS

Buttons and arrow keys simplify operation, enabling intuitive setting of basic functions such as fan speed and temperature. Other more advanced functions can easily be selected from the menu list.

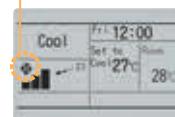

DOT MATRIX DISPLAY

The use of very fine dots enables the display of various icons. These dots also allow text to be larger and easier to see.

BACKLIGHT DISPLAY

The backlight display makes it easy to change air volume or function settings even in the dark.

QUIET NIGHTS IN YOUR NEIGHBOURHOOD

Naturally you want to reduce operating sound to a minimum while sleeping and your neighbours also appreciate a quiet outdoor environment. Wall-mounted CTXM20/25/35R indoor units each provide a low sound pressure level of just 19 dB(A) while 3MXM52R outdoor units are also extremely quiet at 43 dB(A).

19 dB(A) IS SO QUIET YOU CAN EVEN HEAR WHISPERS²

Office

INDOOR UNIT QUIET OPERATION

This function gives you a choice of 5-step, Quiet or Automatic settings for the fan speed. The Quiet setting selects Indoor Unit Quiet Operation, which decreases the sound pressure level by 3 to 9 dB(A) below the Low setting.

This wide range of settings allows you to precisely control the fan speed according to your needs. For example, the Quiet function will help you to sleep more comfortably at night. The indoor sound pressure level is just 19 dB(A) for the CTXM-R series from the 2.0 to 3.5 kW class indoor units.

This function is available with wall-mounted models and duct-connected, low external static pressure models when using wireless remote controllers.

OUTDOOR UNIT QUIET OPERATION

This function decreases the outdoor sound pressure level by 2 to 3 dB(A) below the rated operation. It provides a sound pressure level of 43 dB(A) for the 3MXM52R models. Capacity may decrease when Outdoor Unit Quiet Operation is selected.

This function is available with wall-mounted models and duct-connected, low external static pressure models when using wireless remote controllers.

NIGHT QUIET MODE

Night Quiet Mode reduces the operating sound of the outdoor unit at night to avoid disturbing your neighbours. The function starts automatically when the temperature drops 6°C below the highest temperature recorded that day. During Night Quiet Mode, the outdoor unit continues to operate with virtually the same efficiency. Initial setting is required during installation to activate this function (available for cooling operation).

CTXM20R during cooling operation

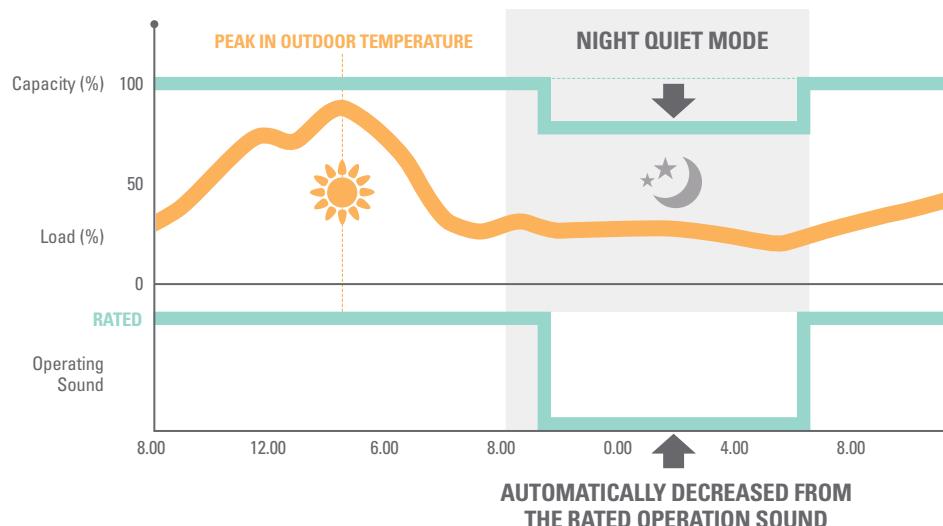

FAN SPEED	SOUND PRESSURE LEVELS
High (H)	38 dB(A)
Low (L)	25 dB(A)
Quiet (SL)	19 dB(A) ²

3MXM52R during cooling operation

OPERATIONS	SOUND PRESSURE LEVELS
Rated (H)	45 dB(A)
Quiet (SL)	43 dB(A)

2 dB(A)

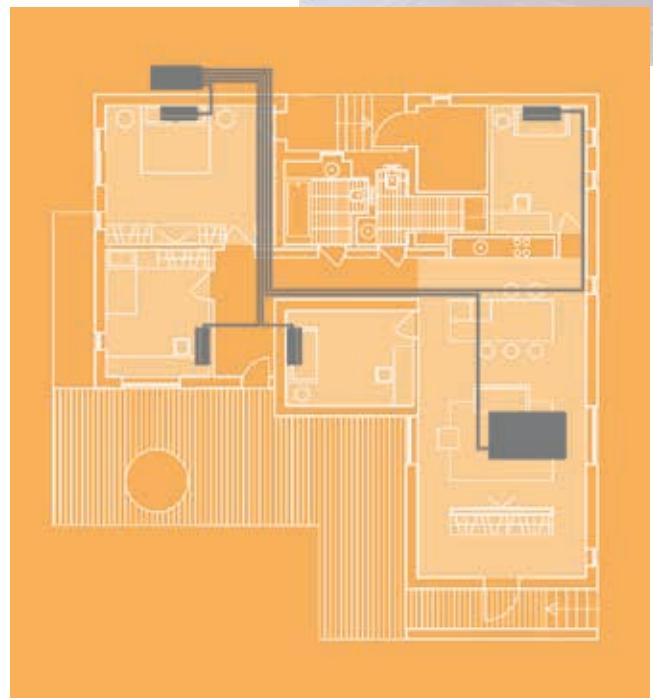

- Notes:
- Based on "Examples of Sound Pressure Levels," released by the Ministry of the Environment, Japan, November 2002.
 - The indoor sound pressure level may increase depending on the operation conditions for other indoor units.

WIDE INDOOR LINEUP SUITABLE FOR ALL YOUR ROOMS

Daikin multi-split indoor units include wall-mounted, floor-standing, duct-connected and ceiling-mounted cassette types. The wide lineup helps you achieve the interior design as well as the cooling and heating you want. These series also have capacities from 2.0 right up to 9.5 kW class. It is so easy to choose the right unit for every room in your home.

WALL-MOUNTED TYPE

Wall-mounted CTXJ (R32) and CTXG (R410A) series indoor units feature a stylish European design. The CTXM (R32) and FTKS (R410A) series have a wide lineup. The CTXM 8.5 and 9.5 kW class units are suitable for large rooms.

DUCT-CONNECTED TYPE

Duct-connected indoor units are for people who wish to use concealed units. The middle external static pressure models have been introduced to give even more flexibility in interior design.

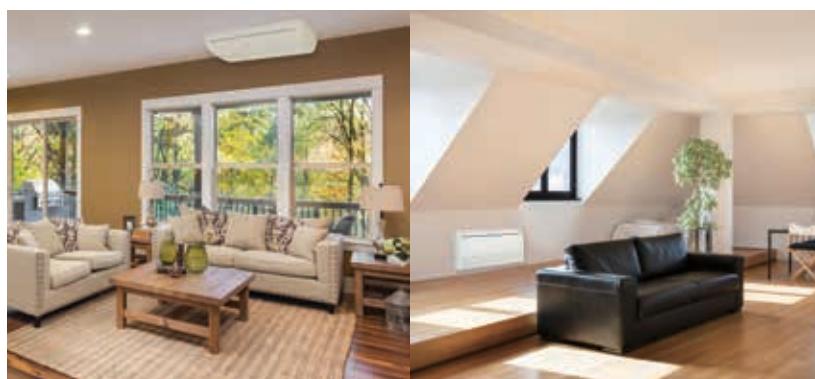

FLOOR-STANDING TYPE

This type can be recessed inside a wall at floor level. It is particularly convenient for living rooms with high ceilings.

FLOOR/CEILING-SUSPENDED DUAL TYPE

This type can be recessed inside a wall at floor level or suspended from the ceiling.

CEILING-MOUNTED CASSETTE TYPE

Ceiling-mounted cassette indoor units enable more flexible installation. They can be set to deliver air in two to four directions depending on where they are mounted on the ceiling.

ELEGANT APPEARANCE WITH CURVED PANEL

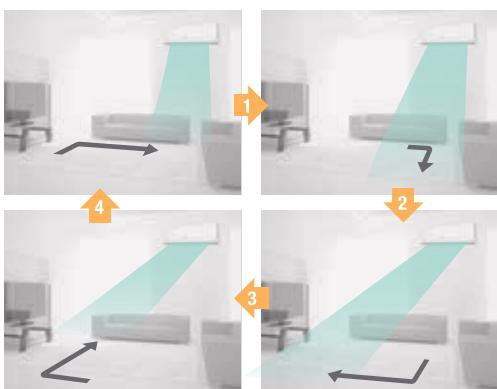

The sleek design of the CTKJ-R and CTXJ-R indoor units feature a uniquely European style. This elegant body houses state-of-the-art technology which delivers superior performance. The series offers a versatile choice for home-owners, designers and architects alike.

3D

3D AIRFLOW

3D Airflow combines Vertical and Horizontal Auto-Swing to reduce indoor temperature fluctuation. This function circulates air to every part of a room for uniform cooling or heating of even large spaces. To start 3D Airflow, push both the Vertical and Horizontal Auto-Swing buttons. The flaps and louvers swing in turn.

THE FLAPS AND LOUVERS SWING IN TURN, EXPANDING THE COMFORT ZONE.

COMFORT AIRFLOW MODE

Comfort Airflow Mode prevents uncomfortable draughts from blowing directly on to a person's body. During cooling operation, the flap moves upwards to prevent cold draughts. During heating operation, the flap turns vertically downwards to drive warm air to the floor.

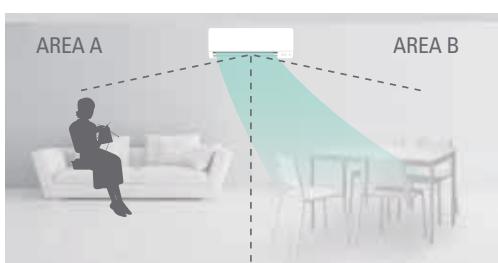

This function is available with the wireless remote controllers.

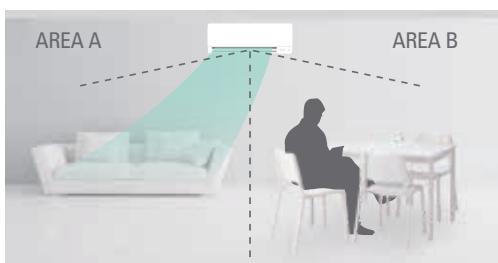

TWO-AREA INTELLIGENT EYE

A combination of Comfort Airflow Mode and Intelligent Eye directs airflow away from people to avoid draughts. If there is no movement in a room for 20 minutes, Intelligent Eye automatically adjusts the set temperature by approximately 2°C to save energy.

This function is available with the wireless remote controllers.

IF A PERSON IS DETECTED IN AREA A, AIRFLOW IS DIRECTED AWAY FROM HIM/HER.

IF A PERSON IS DETECTED IN AREA B, AIRFLOW IS DIRECTED AWAY FROM HIM/HER.

HEAT PLUS

Heat Plus provides quick, direct spot heating using a shower of warm air for 30 minutes. If you return home on a cold day and are sensitive to cold, Heat Plus will warm you quickly without raising the set temperature. It is also convenient in your bedroom when you need to change clothes in the morning.

This function is available with the R32 reverse cycle type when using the wireless remote controllers.

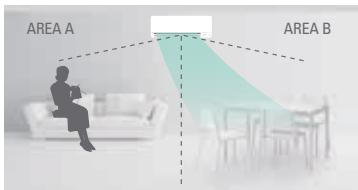

NEW TWO-AREA INTELLIGENT EYE

This function uses its infrared sensor to direct airflow either toward or away from people. Direct airflow may be more comfortable during cooling operation while indirect airflow may be more convenient during heating operation. It also prevents energy wastage by detecting human movement in a room. If there is no movement for 20 minutes, it automatically adjusts the set temperature by approximately 2°C.

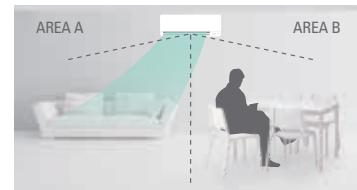

This function is available for the 2.0 to 4.6 R32 models when using the wireless remote controllers.

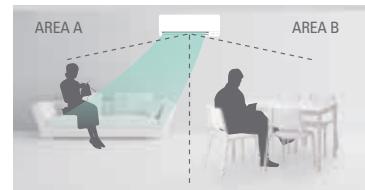

DIRECTS AIRFLOW AWAY FROM PEOPLE TO PREVENT DRAUGHTS

If a person is detected in area A, airflow is directed toward area B.

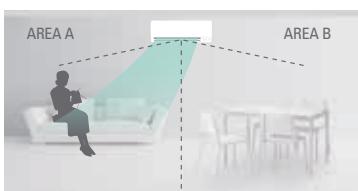

If a person is detected in area B, airflow is directed toward area A.

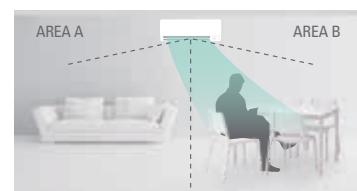

If people are detected in both area A and B, airflow is directed toward area A.

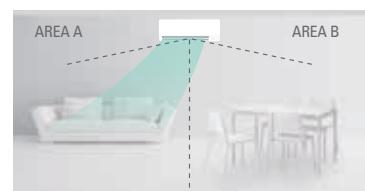

DIRECTS AIRFLOW TOWARDS PEOPLE TO INCREASE COOLING

If a person is detected in area A, airflow is directed toward area A.

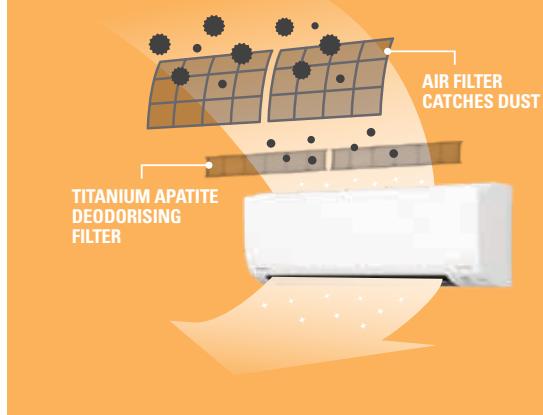

If a person is detected in area B, airflow is directed toward area B.

If no one is detected in either area A or B for 20 minutes, Intelligent Eye automatically adjusts the set temperature by approximately 2°C.

TITANIUM APATITE DEODORISING FILTER

While the filter's micron-level fibres trap dust, titanium apatite effectively adsorbs odours and allergens, as well as deodorises odours. This filter delivers consistent performance for approximately three years if it is washed with water once every six months.

This filter is not a medical device. Benefits such as the adsorption of odours and allergens and deodorisation of odours are only effective for substances which are directly attached to the Titanium Apatite Deodorising Filter.

DUCT CONNECTED TYPE

Middle External Static Pressure

R-32	kW Class		
	5.0	6.0	7.1
FMA50RVMA	FMA60RVMA	FMA71RVMA	

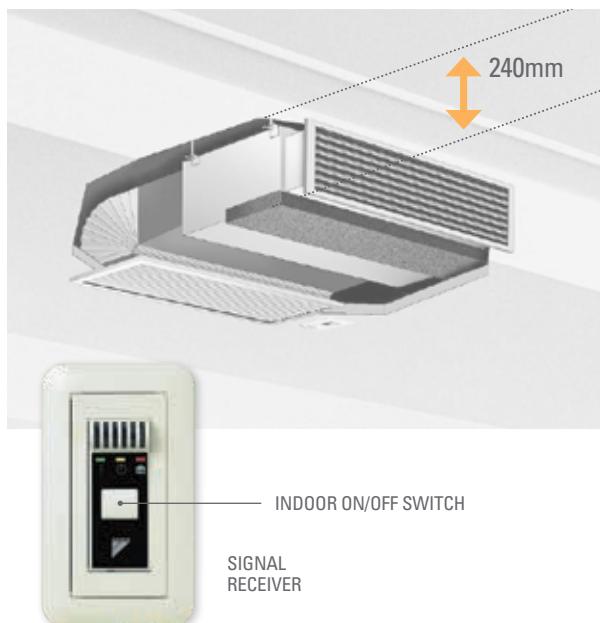

CONCEALED INSTALLATION

The duct-connected type can be hidden inside the ceiling to create a clean exterior. It is suitable for living rooms with shallow tray ceilings or areas requiring a discreet appearance. Low and middle range external static pressure models are suitable for both uses, providing excellent design flexibility.

COMPACT INSTALLATION HEIGHT

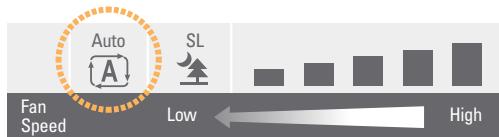

Low external static pressure models are 200 mm high and require a space of just 240 mm between the drop ceiling and ceiling slab. With these compact measurements, any unit can easily be installed in even shallow tray ceilings.

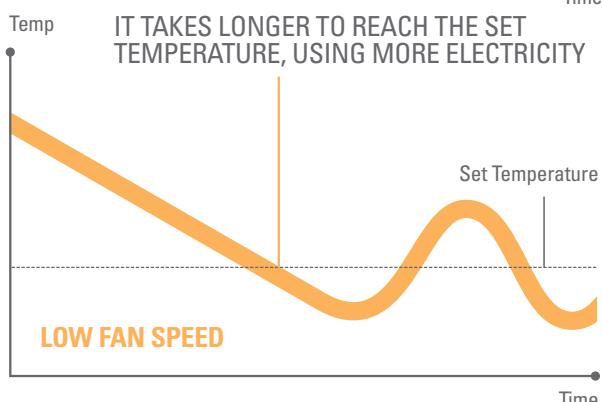

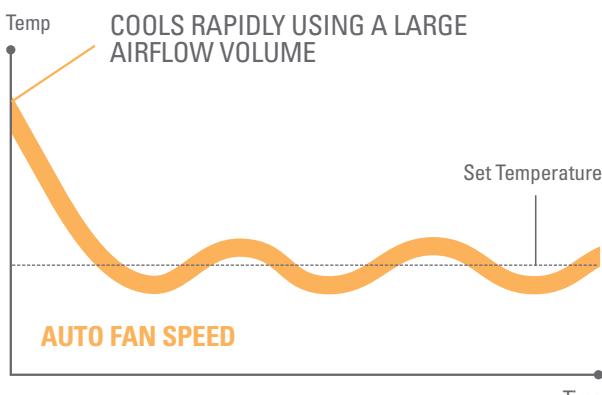

AUTO FAN SPEED

Daikin inverter air conditioners automatically operate at low capacity most of the time. Turning your system on and off means it has to operate at higher capacity to cool and warm the room. To save electricity, it is more efficient to continue operation using Auto Fan Speed.

Selecting this function ensures your system operates with maximum efficiency and comfort without any further setting. After adjusting the fan speed to high to rapidly reach the set temperature, it switches to low. It then precisely maintains the room temperature using its inverter.

DURING COOLING OPERATION

R-410A

FLOOR STANDING TYPE FVXS AND FVXG SERIES

FVXG25K2V1B	FVXG35K2V1B	FVXG50K2V1B

WIPE-CLEAN FLAT PANEL

Dust on the panel surface can be simply wiped away with a soft cloth. The unit can also be installed off the floor to enable cleaning of the space underneath.

DUAL AIR DISCHARGE

Daikin's inverter floor standing units provide highly effective heating operation. While dual outlets diffuse warmth at floor level, vertical auto swing louvers spread air evenly across the whole room. In warmer months, the lower vent can be closed, leaving the top outlet to stream cool, refreshing air up and outwards.

Double airflow keeps the floor warm during heating operation.

DEPTH OF ONLY 115 MM

A cleverly designed flat panel allows the FVXS-K type to be installed either fully exposed against a wall at floor level or semi-recessed in spaces such as the structure around a fireplace. It is particularly convenient for living rooms with high ceilings.

THE EXPOSED PART OF A UNIT MEASURES ONLY 115 MM, ENABLING INSTALLATION ALMOST ANYWHERE.

RADIANT MODE

FVXG NEXURA ONLY

At the touch of a button the FVXG series' (Nexura) aluminium front panel warms up just like a traditional radiator. The result is a comfortable feeling of warm air that envelopes you with a quieter heating experience.

TITANIUM APATITE DEODORISING FILTER

While the filter's micron-level fibres trap dust, titanium apatite effectively adsorbs odours and allergens, as well as deodorises odours. This filter delivers consistent performance for approximately three years if it is washed with water once every six months.

This filter is not a medical device. Benefits such as the adsorption of odours and allergens and deodorisation of odours are only effective for substances which are directly attached to the Titanium Apatite Deodorising Filter.

R-410A

FLOOR/CEILING SUSPENDED DUAL TYPE

FLXS SERIES

R-410A

kW Class				
2.5	3.5	5.0	6.0	
FLXS25BVMA	FLXS35GVMA	FLXS50GVMA	FLXS60GVMA	

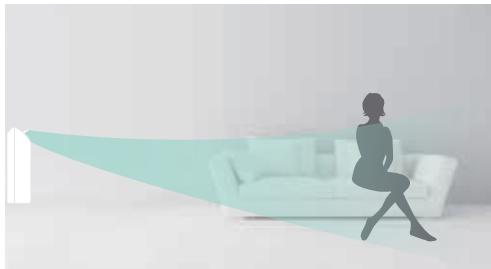

TWO WAY INSTALLATIONS

The floor/ceiling-suspended dual type can be recessed inside a wall at floor level or suspended from the ceiling. Floor level installation is recommended for units which are mainly used for heating operation.

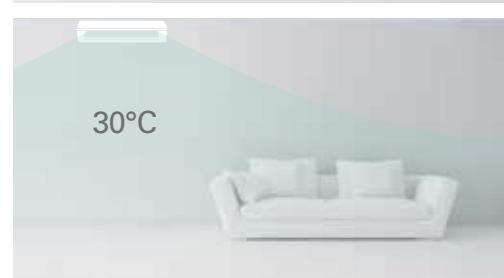

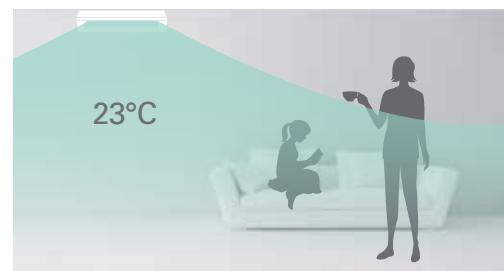

WIDE-ANGLE LOUVERS

Vertical Auto-Swing and Wide-Angle Louvers help to distribute airflow across large rooms, air conditioning the whole space evenly.

HOME LEAVE OPERATION

Home Leave Operation prevents a room from becoming too hot or cold while you are sleeping or out of your home. This ensures you always wake or return to air conditioned comfort. It also means the indoor temperature quickly returns to your preferred setting. The function can be set at any temperature from 18 to 32°C for cooling operation and 10 to 30°C for heating operation.

During cooling operation, with settings of 23°C for the room temperature and 30°C for Home Leave Operation.

CEILING MOUNTED CASSETTE TYPE

FFA-R AND FFQ SERIES

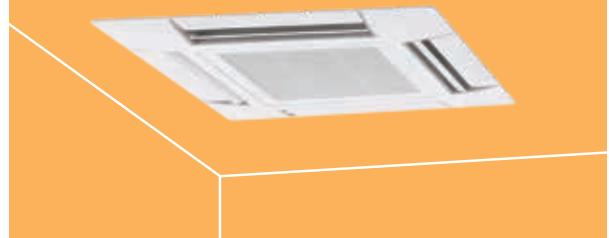

R-32	kW Class			
	2.5	3.5	5.0	6.0
	FFA25RV1A	FFA35RV1A	FFA50RV1A	FFA60RV1A

R-410A	kW Class			
	2.5	3.5	5.0	6.0
	FFQ25BV1B	FFQ35BV1B	FFQ50BV1B	FFQ60BV1B

COMPLETELY FLAT FINISH

This discreet configuration allows the indoor unit to be installed completely flat to the ceiling. The unit is designed to fit inside a ceiling with a height of 300 mm or more and a ceiling grid of just 600 mm wide. This allows lights, speakers and sprinklers to be placed in adjoining ceiling tiles.

DRAUGHT PREVENTION SETTING

The draught prevention setting stops air blowing directly on to a person's body. With this setting, flap movement can be limited to an arc of 0 to 35 degrees¹. This helps to eliminate uncomfortable draughts while maintaining effective airflow.

STANDARD SETTING 0 TO 60 DEGREES

DRAUGHT PREVENTION SETTING 0 TO 35 DEGREES

SOIL PREVENTION SETTING

This setting directs airflow away from the ceiling to prevent dust build-up and other marking. When it is selected, the flap arc is limited to a range of 25 to 60 degrees¹. The result is a cleaner ceiling which requires minimal maintenance.

STANDARD
0 TO 60 DEGREES

SOIL PREVENTION SETTING
25 TO 60 DEGREES

FREE INSTALLATION POSITION

Air discharge patterns including two to four directions can be selected according to the installation position.

HOT START FUNCTION

After defrosting or when starting heating operation, air is preheated before discharge to prevent uncomfortable cold draughts.

Note: 1. Angles shown are provided as a guide. They may differ depending on the installation site.

FUNCTIONS

COMFORTABLE AIRFLOW

POWER-AIRFLOW FLAP

The Power-Airflow Flap flattens out during cooling operation to deliver cool air to the corners of a room. The flap can direct warm air straight down to the floor during heating operation.

POWER-AIRFLOW DUAL FLAPS

The Power-Airflow Dual Flaps can flatten out during cooling operation to deliver cool air to the corners of a room. The flaps can direct warm air straight down to the floor during heating operation.

WIDE-ANGLE LOUVERS

The Wide-Angle Louvers provide wide airflow coverage for effective operation no matter where the indoor unit is placed in a room.

VERTICAL AUTO-SWING (up and down)

This function automatically moves the flaps up and down to distribute air across a room.

HORIZONTAL AUTO-SWING (left and right)

Horizontal Auto-Swing automatically moves the louvers to the left and right to cover a room with cool or warm air.

3D AIRFLOW

This function combines Vertical and Horizontal Auto-Swing to circulate a cloud of cool or warm air right to the corners of even large spaces. The flaps and louvers swing in turn.

COMFORT AIRFLOW MODE

This function prevents uncomfortable draughts from blowing directly on to the body. To prevent draughts, the flap moves upward during cooling operation and downward during heating operation.

COMFORT CONTROL

INDOOR UNIT QUIET OPERATION

Indoor unit operating sound pressure levels can be decreased from the Low setting fan speed using the wireless remote controller.

OUTDOOR UNIT QUIET OPERATION

Outdoor unit operating sound pressure levels can be decreased from the rated operation sound using the wireless remote controller.

NIGHT QUIET MODE

Outdoor unit operating sound pressure levels are automatically decreased from the rated operation sound during cooling operation. It is effective when the outdoor temperature has dropped by 6°C from the maximum temperature recorded during the daytime. Initial setting is required during installation.

AUTOMATIC OPERATION

This function automatically selects cooling or heating operation mode based on the room temperature at startup. This function is available with the reverse cycle type.

INTELLIGENT EYE

Intelligent Eye with its infrared sensor automatically controls air conditioner operation according to human movement in a room. When there is no movement for 20 minutes, it adjusts the temperature by approximately 2°C for energy savings.

TWO-AREA INTELLIGENT EYE

This function uses its infrared sensor to direct airflow away from people. If there is no human movement in a room for 20 minutes, it also automatically adjusts the set temperature by approximately 2°C to prevent energy wastage.

NEW TWO-AREA INTELLIGENT EYE

This function uses its infrared sensor to direct airflow either toward or away from people. If there is no human movement in a room for 20 minutes, it also automatically adjusts the set temperature by approximately 2°C to prevent energy wastage.

PROGRAMME DRY FUNCTION

The microprocessor works to eliminate humidity while maintaining the most consistent temperature possible. It automatically controls the temperature and fan speed.

NEW PROGRAMME DRY FUNCTION

New Programme Dry automatically controls the temperature and fan speed. This enables it to eliminate humidity while maintaining a consistent room temperature.

AUTO FAN SPEED

The microprocessor automatically adjusts the fan speed to high to rapidly reach the set temperature. Once the temperature is achieved, this function reduces the fan speed to low.

COMFORTABLE AUTO FAN SPEED

This function automatically controls fan speed to achieve maximum efficiency and comfort. After rapidly cooling or warming a room using high speed, it switches to low. It then precisely adjusts speed to reduce humidity and ensure a comfortable balance between temperature and humidity.

HEAT PLUS

Heat Plus delivers a direct flow of warm air for 30 minutes. It provides spot heating when returning home on a cold day. It is also convenient when changing clothes in the morning. This function is available with the reverse cycle type.

HOT-START FUNCTION

After defrosting or when starting heating operation, air is preheated before discharge to prevent uncomfortable cold draughts. This function is available with the reverse cycle type.

LIFESTYLE CONVENIENCE

SUPER POWERFUL

This advanced function boosts airflow until the set temperature is reached. It is highly useful whenever rapid cooling or heating is needed. Capacity is immediately diverted to a unit when its Powerful button is pressed. After 20 minutes, the unit automatically returns to its previous settings.

INVERTER POWERFUL OPERATION

This function boosts cooling or heating performance for a 20 minute period. It is convenient when the air conditioner is first turned on or it is necessary to change the room temperature quickly.

ECONO MODE

This mode limits maximum power consumption. This improves operating efficiency and also prevents circuit breakers from being overloaded.

RADIANT MODE

This function allows the aluminium front panel to warm up just like a traditional radiator. The result is a comfortable feeling of warm air that envelopes you with a quieter heating experience.

PRIORITY ROOM SETTING

This function assigns preferential air conditioning to the indoor unit in the priority room. The unit is able to operate at a higher capacity than other units. It also receives priority control over Super Powerful/Inverter Powerful and the operation mode.

HOME LEAVE OPERATION

Home Leave Operation continues operation to prevent a room from becoming too hot or cold while you are sleeping or out of your home. Select any temperature from 18 to 32°C for cooling operation and 10 to 30°C for heating operation.

INDOOR UNIT ON/OFF SWITCH

The unit can be conveniently started by hand if the wireless remote controller is misplaced or its batteries are not charged.

WIRELESS REMOTE CONTROLLER WITH BACKLIGHT

The backlit LCD allows easy operation in the dark. Frequently used functions are conveniently located on the front of the controller.

DAIKIN MOBILE CONTROLLER (optional adaptor)

This optional adaptor and its application turn a smartphone into a remote controller which can be used inside or outside the home. Together they help to maintain comfort while saving energy and eliminate any worries about forgetting to turn off the air conditioner.

CLEANINESS

REMOVABLE DRAIN PAN

The drain pan collects condensation from the indoor heat exchanger fins. Removable drain pans help to reduce the cleaning time and ensure a perfect finish.

TITANIUM APATITE DEODORISING FILTER

This filter contains titanium apatite. While the filter's micron-level fibres trap dust, the titanium apatite adsorbs odours and allergens, as well as deodorises odours. The filter can be used for up to three years with proper maintenance.

AIR-PURIFYING FILTER WITH DEODORISING FUNCTION

This filter is made of titanium oxide. It adsorbs and decomposes bacteria. The filter can be used for up to three years with proper maintenance.

AIR-PURIFYING FILTER

This filter removes impurities such as dust, pollen as well as bacteria and viruses from the air.

MOULD-PROOF AIR FILTER

This filter is hygienic with a mould-proof treatment.

WIPE-CLEAN FLAT PANEL

The flat panel design can be cleaned with only the single pass of a cloth across its smooth surface. The flat panel can also be easily removed for more thorough cleaning.

FILTER CLEANING INDICATOR

Dust deposited on the air filters is not only unhygienic, it also reduces the operating efficiency of the air conditioner. A message indicates when the air filters need cleaning.

Functions are listed based on their use on the wireless remote controllers.

TIMERS

24 HOUR ON/OFF TIMER

This timer can start or stop the air conditioner within a 24 hour period. It can be preset in 10 minute steps by pressing the On/Off Timer button on the wireless remote controller. The On Timer and Off Timer can be used in combination.

72 HOUR ON/OFF TIMER

This timer can start or stop the air conditioner within a 72 hour period. It can be preset in one hour steps by pressing the programming timer button on the wireless remote controller. The controller is optional.

WEEKLY TIMER

The Weekly Timer allows up to four actions to be programmed for each day of the week. It is possible to schedule not only the on and off times, but also the desired temperatures during these periods. The copy function also makes the setting much easier and enables a daily programme to be repeated on other days as required.

COUNT UP-DOWN ON/OFF TIMER

The operation start and stop times can be set with the touch of a single button and preset for a period of one to 12 hours in one hour increments. When the Off Timer is set, Night Set Mode is activated automatically.

NIGHT SET MODE

Pressing the Off Timer button automatically selects Night Set Mode. This function prevents excessive cooling or heating for a pleasant sleep. After 60 minutes, the room temperature is raised by 0.5°C for cooling operation or lowered by 2°C for heating operation.

WORRY FREE

AUTO-RESTART AFTER POWER FAILURE

The air conditioner memorises the settings for the operation mode (cooling, dry, heating, automatic and fan only), airflow, temperature, etc., and automatically returns to them when power is restored after a power failure.

SELF-DIAGNOSIS WITH DIGITAL DISPLAY

Malfunction codes are shown on the digital display panel of the wireless remote controller for fast and easy maintenance.

ANTI-CORROSION TREATMENT OF OUTDOOR HEAT EXCHANGER FINS

The outdoor unit's heat exchanger fins are processed using a special anti-corrosion treatment. The surface is covered with a thin acrylic resin layer to enhance the fins' resistance to acid rain and salt corrosion.

COOLING/HEATING MODE LOCK

With this function, the operation mode can be locked in individual rooms to prevent it being changed. This feature is particularly useful for facilities such as small hotels and is available with the reverse cycle type.

OTHERS

QUICK WARMING FUNCTION

During low outdoor temperatures, this function preheats the compressor to shorten the time required to discharge warm air.

AUTOMATIC DEFROSTING

Before starting heating operation, a sensor checks for frost in the outdoor unit and performs automatic defrosting if necessary before air is discharged.

These two functions are available with the reverse cycle type.

Machine weight		kg		21		25		27		30
Piping connections		Liquid (flare) Gas (flare) Drain	mm		ø6.4 ø9.5		ø12.7		ø15.9	
Heat insulation				VP 20 (Inside diameter ø20, Outside diameter ø26)						
External static pressure				30			40			

Note: *1. The values are for the rear-suction inlet of the CDXP-R at an external static pressure of 30 Pa. Values for the bottom-suction inlet can be obtained by adding 6 dB(A).

The values are for the rear-suction inlet of the CDXM-R at an external static pressure of 40 Pa. Values for the bottom-suction inlet can be obtained by adding 5 dB(A).

When a duct-connected type indoor unit with a reduced external static pressure is installed, values for the bottom-suction inlet are higher.

Duct-Connected Type FMA-R Series

Heat insulation				Both liquid and gas pipes			

Measurement conditions

1. Cooling operation data is based on the following conditions: indoor temp. 27°CDB, 19°CWB; outdoor temp. 35°CDB; piping length 5 m.

2. Heating operation data is based on the following conditions: indoor temp. 20°CDB; outdoor temp. 7°CDB, 6°CWB; piping length 5 m.

3. Sound pressure levels are measured in an anechoic chamber based on temperature conditions 1 and 2 above.

These values are normally somewhat higher during actual operation as a result of ambient conditions.

Notes: 1. Cooling operation data is based on the following conditions: indoor temp. 27°CDB, 19°CWB; outdoor temp. 35°CDB; corresponding refrigerant piping length 5 m; level difference 0 m.

2. Heating operation data is based on the following conditions: indoor temp. 20°CDB; outdoor temp. 7°CDB, 6°CWB; corresponding refrigerant piping length 5 m; level difference 0 m.

3. Total capacity of connected indoor units is; up to 9.0 kW to the 3MKM52R and 3MXM52R; up to 11.0 kW to the 4MKM68R and 4MXM68R; up to the 14.5 kW to the 4MKM80R and 4MXM80R; up to 15.6 kW to the 5MKM100R and 5MXM100R.

4. A single indoor unit cannot be connected for the reverse cycle type.

	25+25+35+35+35	1.77	1.77	2.49	2.49	2.49	11.00 (3.50-12.70)	2,350 (540-3,620)	10.1 (2.4-15.6)

Notes: 1. Cooling operation data is based on the following conditions: indoor temp. 27°CDB, 19°CWB; outdoor temp. 35°CDB; corresponding refrigerant piping length 5 m; level difference 0 m.

2. Heating operation data is based on the following conditions: indoor temp. 20°CDB; outdoor temp. 7°CDB, 6°CWB; corresponding refrigerant piping length 5 m; level difference 0 m.

3. Total capacity of connected indoor units is; up to 9.0 kW to the 3MXS52; up to 11.0 kW to the 3MXS68; up to the 14.5 kW to the 4MXS80; up to 15.6 kW to the 5MXS100.

4. The above is the value for connecting with the following indoor units: 2.0/2.5/3.5/5.0/6.0/7.1 kW class, wall-mounted K series.

5. A single indoor unit cannot be connected.

The specifications, designs and information in this brochure are subject to Change without notice. Unit colours shown are as close as possible to actual unit colours. Colours depicted in this brochure may vary slightly.

ASSUMPTIONS

All representations made in Daikin marketing and promotional material are based on the assumptions that the correct equipment has been selected, appropriately sized and installed in accordance with Daikin's installation instructions and standard industry practices.

QUALITY CERTIFICATIONS

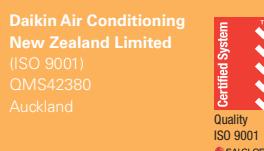

Daikin Industries Limited was the first air conditioning equipment manufacturer in Japan to receive ISO 9001 certification. All Daikin manufacturing facilities have been certified to ISO 9001 Quality Management System requirements. ISO 9001 is a certificate for quality assurance concerning 'design, development, manufacturing, installation and related service' of products manufactured at that factory.

ENVIRONMENTAL CERTIFICATIONS

Daikin Industries Limited has received ISO 14001 Environmental Certification for the Daikin production facilities listed below. ISO 14001 is an international standard specifying requirement for an environmental management system, enabling an organisation to formulate policy and objectives, taking into account legislative requirements and information about significant environmental impacts. It applies to those environmental aspects within the organisation's control and over which it can be expected to have an influence.

The certification relates only to the environmental management system and does not constitute any endorsement of the products shipped from the facility by the International Organisation for Standardisation.
